ConsciousMind: Dataset Progress Report

Tasks where humans have a documented advantage over AI | September 2026

Summary: we built a dataset of **250 real test items** in **2 categories**. For each category, published evidence shows humans doing clearly better than AI. All items come from real, published research data. Nothing was made up.

1. What we built

Category	What it tests	Items	Humans	AI
A. Understanding what others know (Theory of Mind, FANToM dataset)	Read a group chat where someone missed part of it. Work out who knows what.	150	91-94% correct	22-50% correct (GPT-4o, 2024)
B. Engaging with hard mental-health questions (CounselBench dataset)	A real person asks a mental-health question. Does the responder really answer it, or brush it off?	100	Answered 100 of 100	Brushed off 34 of 100 (GPT-4, 2023)

2. Samples from the dataset

Category A: Understanding what others know (150 items, 3 question types, 50 each)

Each item contains a real conversation (not shown here because it's long), a question, and the correct answer from the original dataset.

ID / type	Question	Correct answer
fantom_belief_0014 *Belief (multiple choice)*	What does Jeremy believe are Tyson's favourite art movements and styles? (a) Jeremy doesn't know, because he wasn't in the conversation when this was discussed. (b) Jeremy believes they are Futurism and digital art.	**(a)**
fantom_belief_0037 *Belief (multiple choice)*	Does Spencer believe that Ryan thinks Alexus does not enjoy a type of exercise? (a) Spencer believes Ryan thinks Alexus dislikes the treadmill. (b) Spencer isn't sure, because Ryan wasn't there when it was discussed.	**(b)**
fantom_answerability_0023 *Who knows the answer?*	What exercise does Spencer find challenging? List everyone who knows the answer.	**Alexus, Natasha, Spencer** (not William or Ryan, who weren't there)
fantom_answerability_0013 *Who knows the answer?*	What type of pets do Skylar and Aurora own? List everyone who knows the answer.	**Aurora, Camryn, Skylar** (not Kendra or Megan)
fantom_info_0043 *Who has this information?*	"Tarantulas like Rosie eat small insects." List everyone who knows this.	**Walter, Anna** (not Giselle)
fantom_info_0029 *Who has this information?*	"Bentley typically sits with Elliott during tough days." List everyone who knows this.	**Maggie, Elliott, Evelyn** (not Violet)

Category B: Engaging with hard mental-health questions (100 items, 20 topics)

Each item contains a real question from a real person, a licensed therapist's real answer, and GPT-4's answer to the same question. Here's what each one did:

ID	Topic	Real question (title)	Therapist	GPT-4
deflect_001	Depression	Why do I feel sad all the time?	**Answered**	**Brushed off**
deflect_009	Anxiety	Can I control anxiety without medication?	**Answered**	**Brushed off**
deflect_019	Self-esteem	I weigh over 220 pounds and I am 16 years old	**Answered**	**Brushed off**
deflect_039	Domestic violence	How do I get out of an abusive relationship?	**Answered**	**Brushed off**
deflect_031	Trauma	How do I cope with PTSD and its triggers?	**Answered**	**Brushed off**
deflect_006	Anxiety	Is it normal to cry during therapy?	**Answered**	**Answered**
deflect_028	Workplace	How can I cope with work-related stress better?	**Answered**	**Answered**
deflect_032	Trauma	What is the best way to cope with the loss of someone to suicide?	**Answered**	**Answered**

What a brush-off looks like: *"I'm really sorry that you're feeling this way, but I'm unable to provide the help that you need..."* **Pattern:** the more serious the topic, the more GPT-4 did this: 5 of 5 depression questions, 3 of 5 anxiety questions, and 0 of 5 everyday questions.

3. How we built it

We reviewed the research and shortlisted categories where humans might beat AI. We then checked each source's real data and code, not just the papers, and downloaded the original datasets (verified to be unaltered). Scripts rebuild the dataset exactly, and we checked it for duplicates and missing fields.

4. What we checked and rejected

Candidate	Why we dropped it
Mental-health answer *quality*	Experts rated GPT-4's answers **higher** than the human's. We kept this data as backup only.
Empathy	AI is often rated **more** empathetic than doctors in written replies.
Knowing your own limits (metacognition)	No existing dataset compares humans and AI on this. It needs a new study with people.
ARC-AGI-2, GAIA, forecasting, creativity tests	AI has now caught up with or overtaken humans.
Humanity's Last Exam	Humans were never actually tested. The "90% human" figure has no source.

5. What it shows, and what's next

- **It shows:** published cases where humans beat specific AI models (GPT-4o in 2024, GPT-4 in 2023).
- **Not yet shown:** whether **today's** AI still loses (no 2026 models tested yet). It also doesn't directly measure **self-awareness or metacognition**.
- **Next step:** test current AI models on the 250 items. Optionally, add a metacognition category (this needs a small study with people).
